## MANAGER'S COMMENTARY

Evolution Europe ended October lower in a bear market that fell, victim to macroeconomic concerns. In that irrational market, the fund underperformed its benchmark index, despite market conditions that are usually beneficial to the defensive nature of our investments.

Sectoral performances did not favour Evolution Europe, since the most resilient sectors were utilities and telecoms, which the fund is absent from, whereas service companies, which we are highly invested in, trailed the pack at -9.26%.

There are other reasons for this underperformance, however. As convinced investors, a point explained in our previous reports, we have started taking positions in companies that had already been impacted, losing up to 50% of their value in some cases (Tarkett and Maisons du Monde). That said, it is never possible to identify when a stock will bottom out, even when it has very high upside potential. For example we invested in Sopra at €70 when it bought Steria, and it reached €180 this year, but it had begun falling at €50 (i.e. -30%) in the months following the acquisition. We bought into the stock again at between €125 and €150 this year, consequently suffering from the sell-off following the recent profit warning (impact: -85bps). Tarkett's share price also fell despite a decent trading update, but we preferred to sell this position because the business environment (prices/raw materials) appeared less supportive. We remain confident in the success of the reinvestments made during the sell-off, some of which are already in positive territory.

Micro Focus International lost 14% after rallying strongly in the previous months, costing the fund around 80bps. Its recent results were slightly ahead of forecasts, and the stock has since rebounded. To illustrate how jittery the markets are, Philips lost 16% (impact: -75bps) despite reporting results ahead of forecasts at constant exchange rates, with an investment case that has not changed one iota.

The only real disappointments were Fresenius SE and Fresenius Medical Care, whose respective results revealed difficulties that appear structural to us, prompting us to divest our stakes in the two companies, with a negative impact on the fund of approximately 50bps.

While the current market environment is prone to anxiety, it represents an opportunity for us since, for the first time in several years, we are able to reinvest in quality and value-creating companies with high upside potential of over 40% in some cases. We therefore buy from "weak hands", who sell for technical reasons (funds outflows) or for lack of understanding of the stocks they hold, while taking a close look at the macroeconomic and liquidity risks. We truly believe that our current investments will pay off handsomely. For illustrative purposes, the fund's upside potential is at a five-year high of over 40%. The fund has clawed back ground relative to its benchmark index in November at the time of writing this investment commentary.
